

# Case Study

Cyber Vault/Recovery Solution  
(Data Vaulting & Recovery/Air Gap)

Large Multinational Corporation  
*NY, USA*

## BUSINESS CASE

Our client is a large American multinational corporation involved in marketing and distributing food products to restaurants, healthcare, educational facilities and many other sectors. They had a recent Cyber/Ransomware attack which harmed their systems so they needed a solution to recover their business after the attack. As part of our Services offering, NYGCI partnered to provide accurate and efficient recovery of their system, data and applications.

## SOLUTION PROPOSED

We have proposed customer to leverage Dell EMC for Cyber Vault/Recovery/Air Gap Solution for recovering business from cyber/ransomware attacks.

Before beginning the implementation, a 4-day Proof of Concept (POC) was conducted by our team, followed by a 3-day testing phase on the real environment in order to ensure the success of the project and customer's satisfaction. This approach helped us reach the level of data protection required with no additional hardware/software costs.

## CHALLENGES

- Major security breach that led to the cyberattack
- Having their data not protected against any type of attack
- Identification & segregation of applications/platforms to save the copy into the vault

## SOLUTION BENEFITS

- Cyber Vault solution protects customers from potentially devastating attack/ransomware
- Immutable clean backups using this solution provide an additional defense against data and revenue loss while also minimizing costly downtime.

## CUSTOMER SATISFACTION

"Thankful for NYGCI team who provided professional support to recover our data after the attack to save our business and offered a great solution to protect us in the future". *VP of Operations*
