

# Intelligent Data Protection Solution

## Petroleum/Energy Customer

How NYGCI used retention-lock with Dell EMC's Avamar to protect customer's data!

Note: Due to confidentiality agreements, the customer's name and details are not to be disclosed.

”

As a customer with a tight budget, I believe that NYGCI team was able to achieve our goal with the minimum costs and without having to buy additional hardware. Our backup-data is protected now and we are able to recover it if any attack happens. Services were smooth and accurate.

We are satisfied form the overall performance!

”

- Vice President, Marketing

## Our customer already had a Dell EMC-based infrastructure consisting of Data Domain and Avamar

Their main goal was to add a layer of security and protection in the era of increasing cyberattacks to protect their data at minimal cost

To achieve their goal, our professional team of specialists in data protection together with Dell EMC support were able to mitigate the possible risks by leveraging immutable copies on retention lock data domain mtree, a feature available in the existing hardware.

Before beginning the implementation, a 4-day POC was conducted by our team, followed by a 3-day testing phase on the real environment in order to ensure the success of the project and the customer's satisfaction.

This approach helped us reach the level of data protection required with no additional hardware/software costs.
