Oracle Database IT Support

U.S. Naval Research Laboratory

Database Services Management

Client: U.S. Naval Research Laboratory

Project Name: Oracle Database IT Support

Years of engagement: 2017-2022

Objective:
Oracle database and database application level support, primarily including the NRL
NCST SpaceMIS application;

- (a) Conceptual design, configuration, implementation, and maintenance of relational and non-relational databases applicable to enterprise-wide computing;
- (b) Design, program and task specific databases to achieve system automation, enhanced data access, and maximized data sharing while reducing redundancy and duplication of effort;
- (c) Develop and document database application and user documentation;
- (d) Subject matter expertise to provide in planning, procuring, and managing database infrastructure and other resources to best meet the current and future needs and requirements of the directorate.

NYGCI's Approach:
Our on-site Oracle professionals manage NRL's SpaceMIS database systems:

- ✓ Oracle database and database application level support, primarily including the NRL NCST SpaceMIS application;

- ✓ Conceptual design, configuration, implementation, and maintenance of relational and non-relational databases applicable to enterprise-wide computing;

- ✓ Design, program and task specific databases to achieve system automation, enhanced data access, and maximized data sharing while reducing redundancy and duplication of effort;

- ✓ Develop and document database application and user documentation;

New York Global Consultants Inc.

- ✓ Subject matter expertise to provide in planning, procuring, and managing database infrastructure and other resources to best meet the current and future needs and requirements of the directorate.
